

Thinglink
Thinglink
Thinglink

The image is a film strip frame with a black border and white sprocket holes. Inside the frame, there is a 3D scene. A soccer ball is positioned in the center, slightly to the right. The background is a light blue sky with white clouds. In the foreground, there are several blue and white geometric shapes, including a large blue sphere and a white sphere. The word "Thinglink" is repeated three times in different colors and orientations: red at the top, green in the middle, and purple at the bottom. The text is slanted and appears to be floating in the scene.

Once you sign
in this is what
the home page
will look like.

Using this button you can bring all of the controls and options to your screen.

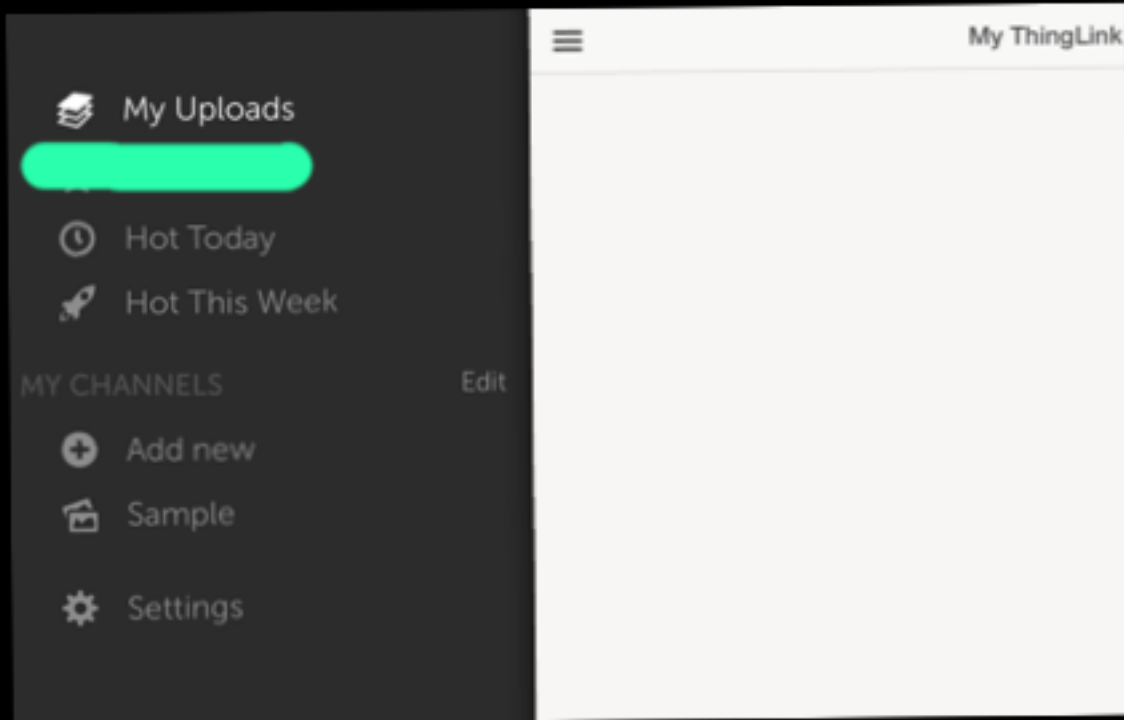

Using the add new button you can create a channel for students to share their thinglink creations with you.

The channel will show up below and this is where you will click to view the thinglinks your students created.

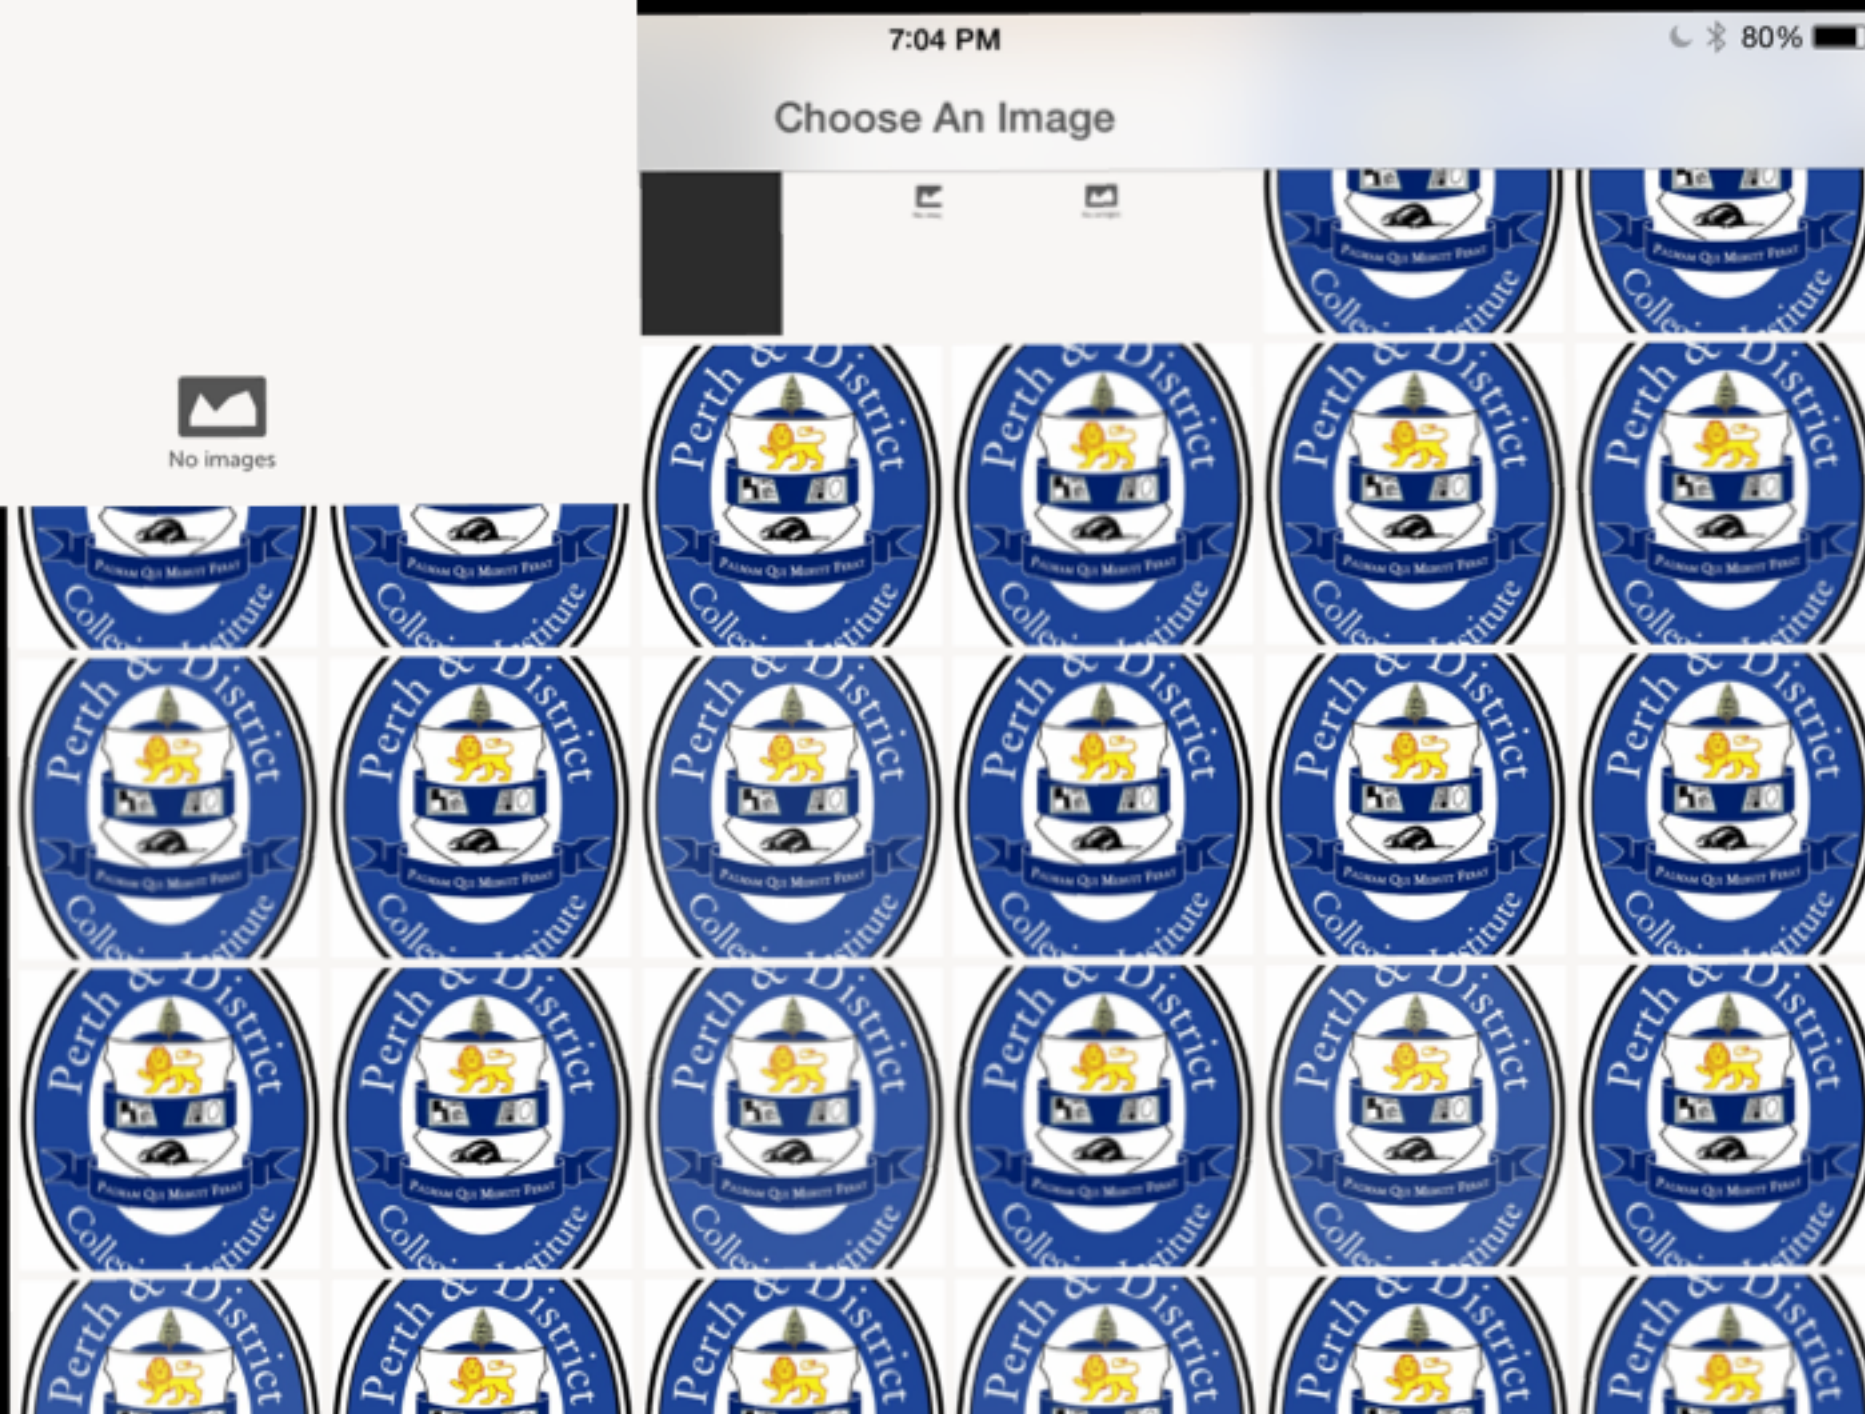

The channel will look like this until images are added.

Under the my uploads button is where you can create your own thinglink images.

First you hit the plus button.

Choose an image from your camera role or take a picture for the back ground.

This is what it will look like after you have chosen a background image.

Now add a title.

To add information to the picture all you have to do is tap the screen and a icon will appear.

Symbol for text.

Symbol for image.

Symbol for videos.

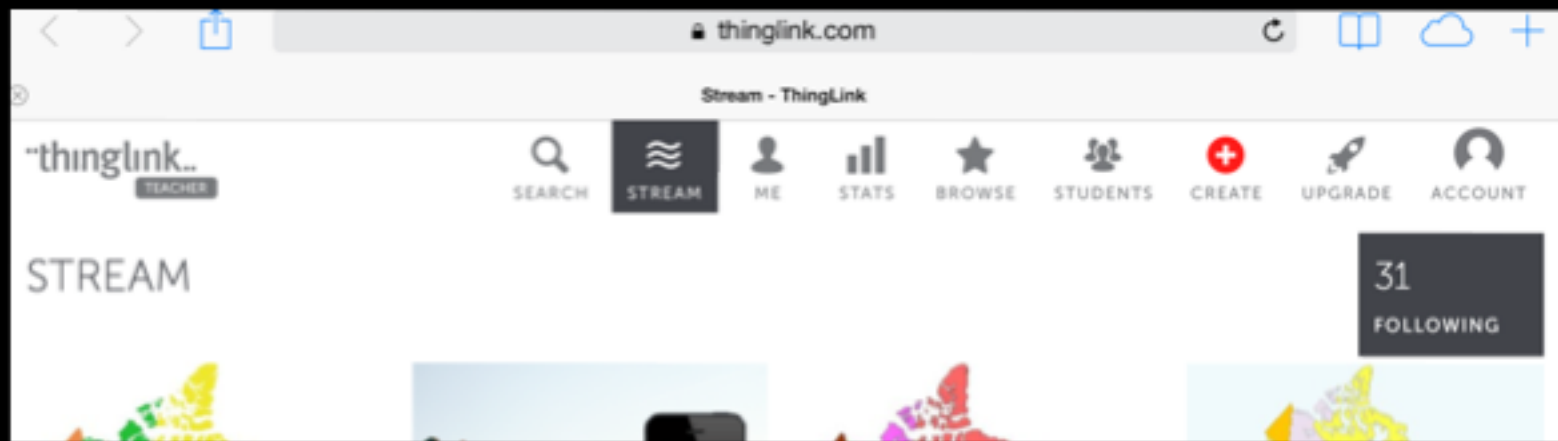

Once you have added all that you would like to your photo hit the save button.

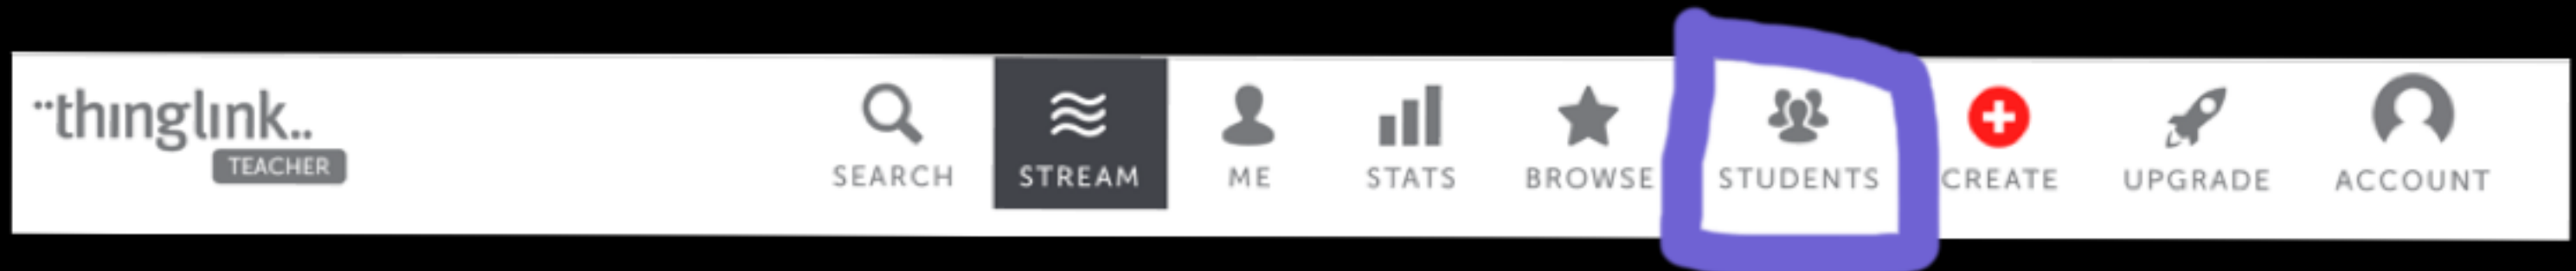

The saved image will then appear under the category of "My Thinglink Images."

For a student that is all
the information needed
to make a thinglink.

For the teachers, you will now need to go to your web browser and go to the website version of the app.

Along the top you will have these options.

For a classroom assignment you will need to create accounts for your students, which is done under the category of students.

Create a new group

When you create a new group, you automatically become its master user. You can rename a group by switching to a group, then going to Settings and changing the name.

Name

CREATE GROUP

To add your students you will need to create a group.

Instructions

Signup new students to ThingLink by writing one name per line in the box. The contact email of these accounts will be YOUR email, which means that you will receive all notifications from the accounts, including password recovery links. The students can change their email address from their own settings dialog.

After clicking on "Add students", new accounts will be created. You will then see their login ids and passwords, which you MUST store, since they will no longer be available afterwards.

Note that names need to be unique - two students cannot have the same name. So using a student ID or something equivalent is a good idea.

If you have any students which already have a ThingLink account, please go to your [Manage Group](#) view and invite them separately. This form only allows adding new accounts.

One-time sheet of added students - ThingLink

thinglink..

One-time sheet of added students

Created by: Greg Anderson (greg.anderson@ucdsb.on.ca)

Student users were created successfully.

ATTENTION! These passwords are only shown once, do not refresh the browser page.

Please distribute the login and password information to your students. If the passwords are lost or forgotten, students will need to request password recovery, a link for recovering the email address, not to the student's one. Note that "1" is always the digit "1" never the lowercase letter "l".

RETURN TO GROUP MANAGEMENT »

Finally print out the usernames and passwords and hand them out.

Once you have all your students registered, you can use this app for almost any class. Get creative!
